## How to Order Foundry Type

THE DESCRIPTIVE INDEX displays line specimens of 248 series of type regularly made for stock in fonts.

FACES AND SIZES NOT SHOWN in this list are no longer available from stock. Any type, border, ornament or special character can be made to **special order** (if our Foundry has the matrices) either in a six-inch line of any single character or piece of type, or in fonts under provisions of our subscription casting plan, as explained below.

THE SUBSCRIPTION CASTING PLAN was instituted in 1952 to enable customers having a particular need for obsolescent items to obtain them at mass-production prices. The plan includes any fonts made by American Type Founders in years past, provided matrices are now in usable condition. No assurance of ultimate delivery is possible on subscription orders, which are accepted only with the definite understanding that manufacture will not be started until enough orders for the same item are in hand. Any size in a series will be made, delivered and invoiced when orders for that size equal the casting quantity, and the Foundry assumes no obligation to make any other size until there are enough orders for the same item to take all the fonts required for a minimum casting. No surplus fonts are made for stock. Fonts ordered on subscription orders may never be returned for credit.

MINIMUM PRODUCTION QUANTITIES for subscription casting orders to sell at standard prices will be, in each size of any series, as follows: 6 to 12 point, 30 fonts; 14 to 30 point, 20 fonts; 36 point or larger, 10 fonts. Handmade script faces such as University Script and Stationers Semi-script will sell at prices charged for similar fonts of Bank Script and Type Script.

TYPECAST PRODUCTS (SORTS) IN FOUNDRY LINES are available as shown in Table E-1 of our current price list. A "foundry line" comprises as many type, cast from one matrix, as can be placed in a 36-pica line. No line will contain more than one kind of letter, figure or other character.

Any character that may be produced by ordinary methods will be cast to order in foundry lines. This includes type sorts or accented letters for current or obsolete faces; any space or quad (regular, angle-body or script) in any size; any typecast ornament, border or corner piece, and any trade-mark, emblem or other proprietary device made from customers' matrices.

ATF'S NEW ONE-DAY SORTS SERVICE covers all 250 faces, in sizes 6 to 72 point, made for regular stock in fonts. You may order sorts of any caps, lowercase and figures you select, ten or more different characters, in whatever quantities of these characters are contained in one font, as shown in table on opposite page.

To facilitate one-day sorts service, you are invited to send your orders direct to the Foundry at Elizabeth, where the sorts desired will be taken from a font in stock. Ask your ATF Regional Office or your ATF representative for a supply of order form ATF 1500. The form explains how it is to be used, and shows prices. If the font is in stock at the Foundry, sorts will be shipped the same day order is received. Sorts may never be returned for credit.

## Information Shown in the Index

SPECIMEN LINES of each type series are set in 18 point if that size is made. The copy used was chosen because the sentence employs 23 different letters of the alphabet.

PROPER NAMES OF SERIES are very important when type is ordered to replenish fonts in cases. When type is to be matched, set a word or two from the case and compare with printed words for set width and alignment.

CODE NUMBER OF SERIES should be specified on every order to prevent confusion if the name of the series is abbreviated or indistinctly written.

ALIGNMENT POSITION of face on type body is shown as "common line," "art line," or other. The vertical rule in each specimen line graphically indicates relative alignment.

BODY SIZES AVAILABLE IN FONTS are shown in typographic points. Those printed 6-2 or 12-56 are read "6 point number 2" or "12 point number fifty-six." Sizes printed 18/24 or 120/96 should be read "18 point face on 24 point body" or "120 on 96." If you desire a body size that is not listed, this omission indicates that it is no longer put up in fonts except under the subscription casting plan, or must be cast to order in foundry lines.

FONTING SCHEMES are indicated as 6A, 10a, 5-1 (for example), referring to capitals, lowercase and figures, respectively. For an approximation of the other characters included in a font package, refer to the table printed on the opposite page. Every package is made up of full six-inch lines of type. The table shows the minimum quantity of each character in any font. Letters most likely to be generally useful are added to the scheme to fill out the lines, instead of putting in a wooden plug. Punctuation marks, generally called "points," are packaged in both cap and lowercase fonts. Periods, commas, hyphens and dollar marks are also included with figures. Special characters such as parentheses, em dashes, reference marks, double quotation marks, cent marks or double letters are not made for every type series. Some of these are included in fonts of our newest faces, in very limited quantities, where the scheme permits. These may be ordered separately in auxiliary fonts or as sorts in foundry lines.

FONTS STOCKED ONLY AT THE FOUNDRY are marked, for each size, with an asterisk (\*). All ATF Regional Offices normally carry an adequate stock of those fonts not marked with an asterisk.

FACES MADE ON ANGLE BODIES in sizes 18/24 and larger are indicated with a "bullet" or round dot. Such fonts are not available on square bodies. Angle body fonts contain a sufficient quantity of angle spaces.

TYPEWRITER FACES are now fonted to standard schemes the same as other types. For printing facsimile typewritten letters, extra fonts of lowercase are recommended. Justifiers are spaces used with typewriter type, to align letters one above the other. Justifiers must be precisely the same setwise thickness as typewriter characters. Justifiers are put up in packages of approximately one pound and sell at the same price as other spaces. When ordering, send sample justifier or typewriter character if identity of the face is doubtful; otherwise specify type for which justifiers are required.

# Important Notice

When a new font of type is to be laid in the case, first pull a proof of it, to identify strange characters and to prove any claim for damaged or missing letters.

## Composite Quantity Fonts

NO TYPE IS NOW SOLD BY THE POUND, either in weight fonts or when cast to order. All foundry type, typographic accessories, spaces and quads are priced by the font, package or 6-inch foundry line.

When weight fonts or quantity fonts are ordered, such fonts will be made up of job font packages in the following proportions unless otherwise specified in the order:

### COMPOSITE QUANTITY FONTS

Point Size	Approximate Weight	Number of Unit Packages		
		Caps	Lowercase	Figures
6	5 lb.	2	4	1
8	9½ lb.	2	6	2
10	20 lb.	3	9	3
12	19½ lb.	3	7	2
14	18½ lb.	2	6	2
16	18½ lb.	2	6	2
18	18½ lb.	2	6	2
24	25 lb.	2	6	2

Job font unit prices and quantity discounts apply.

## General Information About Type

**IDENTIFICATION OF FACES.** When you are unable to identify a type face to be matched, send with your order a proof of several words containing the letters Cap H and lowercase m. The actual letters H and m are better than a proof. The type supplied, if available, will match your sample exactly in face, body, set and alignment. Original nick patterns may not in all cases be duplicated. Moulds originally used for many old faces were discarded when they became worn or were damaged.

**CHANGED NICK PATTERNS.** The Foundry is striving to simplify production and hold down the price of type by eliminating multiple-nick combinations wherever practicable. The nick in a piece of type is formed in the mould. Moulds on foundry casting machines are not readily interchangeable. A separate casting machine must be available for every nick pattern. Formerly our equipment included hundreds of machines that came from different foundries. When these machines were replaced, it was necessary to adapt new faces and change the nicks in some old faces to standard patterns that would reduce expense and facilitate rapid service. Even in the past, all type larger than 18 point, unless made on hand-operated casting machines, was made with a single uniform nick. To distinguish between nearly similar faces, such as the Alternate Gothics, or the two 24-point sizes of Wedding Text, an extra nick is dressed in by hand after the type is cast. To provide identifying nicks on smaller sizes of type, the foundry employs the following patterns:

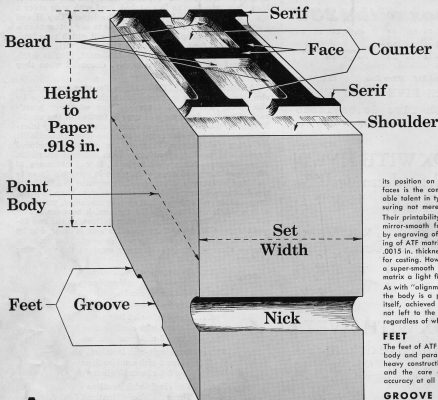

- 6 pt. . . . Two single-nick locations
  - Two 2-nick combinations
  - One 3-nick combination
  - One 4-nick combination
- 8 pt. . . . One single-nick location
  - Three 2-nick combinations
  - Three 3-nick combinations
- 10 pt. . . . One single-nick location
  - Three 2-nick combinations
  - One 3-nick combination
- 12 pt. . . . Two single-nick locations
  - Three 2-nick combinations
- 14 pt. . . . Three single-nick locations
  - One 3-nick combination
- 18 pt. . . . Two single-nick locations

**SPECIAL NICKING AND CUTTING.** A special charge of 10 cents per nick per 6" line will apply on orders requiring additional nicks to be placed in type. This rule does not apply on fonts made for stock. When type is to be cut down to a special height, there will be an extra charge of 25 cents per 6" line, in addition to the cost of type in fonts or foundry lines. A tolerance of .001" plus or minus must be allowed for machining operations, which cannot be guaranteed accurate as foundry casting to normal height, .918".

**ACCENTED LETTERS** are not included in fonts made for domestic use. The very limited demand for accented letters does not warrant making fonts for a wide variety of faces and sizes. There is no comprehensive catalog of available accented letters. Order accented characters as sorts at prices given in Table E-1 of the Price List, specifying each character desired, type face and number, and body size. If matrices are available for everything included in the order, it will be filled promptly, otherwise the customer will immediately be notified by the Foundry Order Department.

**HAND-MADE SCRIPTS ON WING BODIES** are Bank Script, Commercial Script, Royal Script, Typo Script and Typo Script Extended. These are sold at special prices shown in Section II of the Price List.

# THE ANATOMY OF ATF TYPE

## ALIGNMENT

In ATF type, alignment is built into the matrix. The base, or line, of the letter is an integral dimension of the matrix and is not left to the casting machine operator's discretion. Every letter cast from ATF matrices will align regardless of when it is cast. Casting machines not having this feature cannot constantly cast quality type. Accordingly, carelessness, lack of skill on the part of the operator, slippage or wear can all result in different adjustment and alignment on different letters or different castings.

## BODY

An efficient body must be strong. Making metal hard is a simple matter, but a metal that will withstand abrasion by paper stocks as well as the abusive pressures of printing and reproduction methods such as stereotyping, electrotyping, rubber plate molding, etc., must be more than hard. It must be tough. ATF type is tough but its toughness rests not alone in the metal formula. To produce a tightly compressed, fine grain metal the molten metal must be cast at high temperature under high pressure in a water-cooled mold. Ordinary type casting machines cannot match the high pressures or high temperatures of ATF casters and few are equipped with water-cooled molds. In conse-

quence, many competitors are unable to match the hardness of ATF type, even if they use ATF metal. By the same token, we can cast harder type from their metal than they can.

Accuracy is another important requisite of the type body. If the body of a character tapers in any direction or if its four sides are out of square, this character cannot set snugly against its neighbors, is bound to produce a spongy line or form. Here, again, the heavily constructed, non-adjustable mold which characterizes ATF casters assures a degree of accuracy which others can seldom match.

## COUNTER AND DEPTH

ATF matrices are engraved — not stamped — in hard nickel brass. They are cut with precision tools which assure clean walls and sharp edges, even at maximum depths. Most matrices are stamped or punched, rather than engraved. Because of this fact they require a softer brass and there is a definite limitation on the depth to which the punches can be driven, particularly in the shaping of counters.

## FACE

The face of ATF type has three distinctive features — its design, the efficiency with which it lays ink onto paper uniformly and sharply and

its position on the body. The design of ATF faces is the combined work of the best available talent in type design and type layout, assuring not merely novel but PRACTICAL faces. Their printability comes from their sharp edged, mirror-smooth face and can be obtained only by engraving of the finest sort. The final engraving of ATF matrices is done with tools as fine as .0015 in. thickness, which provide a fine surface for casting. However, ATF goes further to obtain a super-smooth printing surface by giving each matrix a light finishing coat of chromium.

As with "alignment," the position of the face on the body is a precise dimension in the matrix itself, achieved by expert hand finishing. It is not left to the operator, hence it is identical, regardless of when the type is cast.

## FEET

The feet of ATF type are always square with the body and parallel to the face, because of the heavy construction of the mold on ATF casters and the care expended in maintaining their accuracy at all times.

## GROOVE

The groove in ATF type is machined during the casting operation. ATF casting machine operators are careful to keep their grooving knives both sharp and properly adjusted and thus avoid the burrs that make some other types more than type high or uneven on their feet.

## SET

The set of ATF type, like its "alignment," is built into the matrix and is not subject to the variations of an adjustable mold. That the set is always identical in ATF type, regardless of when it is cast, is further guaranteed by the fact that the precise dimension of each character is stamped on the matrix as a guide to the operator and the inspectors who maintain a constant check on the accuracy of the ATF product.

Good letterspacing is normal with ATF type. Each character is fitted individually to look its best with all other letters in its alphabet. Overhanging letters set well because they are properly kerned and rubbed — a PLUS VALUE in ATF type.

## TYPE HEIGHT

The carefully controlled depth of ATF's engraved matrices, plus the equally accurate height of ATF molds, produces type of constantly uniform height. Further precaution against inaccuracy is the rigid ATF inspection which discards any type that is over .0005 in. high or low.
